

More Dust Storms On Mars

There's a terrifying genetic secret kept in a long abandoned dark and wet underground Soviet Union lab. Now, an elite team is about knock on their door to find out what the-now-dead scientists secretly did down there.

The above sounds like a SCI FI movie sequel that someone is trying to get funded. But this project, **#MoreDustStormsOnMars**, is diverse projects using only a 3D printer...and that's not science fiction.

Who The Projects Will Benefit?

Too small to see or too dark to see is always dangerous, but not just in science fiction movies. Too small or too dark to see is like the dust storms in Mars...they can kill. Why we use: [#MoreDustStormsOnMars](#)

The projects to SEE then REDUCE the dangerous uses a machine the size of a souped-up coffee machine. That souped-up coffee machine is what we require to:

- **GIVE CLEAN WATER:** to help reduce children dying from drinking water containing heavy metals;
- **BRING LIGHT TO THE MILITARY:** to help reduce the likelihood of military personnel on the ground from dying;
- **HELP FIX SPINAL CORD INJURIES:** for our Phase I in fixing spinal cord injuries.

These diverse projects use the same souped-up coffee machine. It's why we need help now.

Watch the video created in-house for this important project here at this crowdfunding site or on YouTube:

[MORE DUST STORMS ON MARS: ONE MACHINE = MANY GLOBAL PROJECTS](#)

Who Are We?

We are [Global Health Science Institute](#), an emerging 501(c)(3) non-profit organization focusing on human diseases and injuries. We are located in the southwest United States, and our internet home is www.GlobalHealthScienceInstitute.org. We are the satos—the mutts—of science, and we will never be a mega non-profit where your donated funds are wasted on:

- \$100,000.00 per month on AdWords [use SpyFu.com to see that data from mega non-profits]; and
- outside ad/fundraising agencies.

Global Health Science Institute also does not:

- use radioactive material...it's why we created [RADIOACTIVE FREE ZONE](#);
- experiment on animals...it's why we created [LAB ANIMAL FREE ZONES](#);
- keep Intellectual Property developed from patient samples...it's why we created [NO BIOLOGICAL SLAVERY](#).

YOUR help is needed for this crowdfunding project to obtain that souped-up coffee maker...an EMBER 3D printer.

1. This 3D printer uses liquid instead of sticks—for a better small-size resolution.
2. With this 3D printer, users can create their own liquid—to exceed the capabilities of the machine's original designers.
3. This 3D printer also operates using open-source software for global collaborations.

We have 4 partnership levels to cover all levels of enthusiasm for you, your friends, and your organization! See those levels at:

<http://www.globalhealthscienceinstitute.org/moreduststormsonmars.html>

Plus, ALL PARTNERSHIP LEVELS are tax-deductible, as GLOBAL HEALTH SCIENCE INSTITUTE is a [501\(c\)\(3\) organization](#).

With many thanks.

Sincerely,

Richard
